

Flight Log Software

As my fleet started to expand, I found it difficult to keep track of maintenance. Due to high vibrations in helicopters, parts tend to wear out on a regular basis. In order to keep them running in top form it is important to perform routine maintenance and inspection. Some parts like the battery switch and glow plugs should be replaced at specific intervals.

I decided to write a program called FlightLog to help me maintain my models. Its was originally only to tack maintenance cycles. For instance, I could set up schedules to replace my glow plug after 100 flights or clean my fuel filters after 50 flights. As I created flight logs the program would warn me when my maintenance period was coming up.

I then expanded it to track and maintain many aspects of the hobby. I offer this program free of charge and it can be found here:
