I am a professional Engineer specializing in electrical engineering. I have been working in the Tire Pressure Monitoring Systems business for the last 20 years. We have been developing TPMS for a wide range of applications from Indy cars to Mining trucks. I am the co-inventor of many patents in this field. I was originally employed by SmarTire Systems but the company was purchased by Bendix Commercial Vehicle Systems in 2008. Since then we have been focused on TPMS solutions for the commercial vehicle market.
